CHALLENGE

Introduce sugar into Kombucha and eliminate lumps in the product.

SOLUTION

With the wide variety of drinks this company makes, the customer decided to purchase the larger powder mixer unit; the PMR15/530. This unit includes the Ampco SBI blender and an LFV530 discharge pump. Ampco designed the unit to include motor starter and a VFD so adjustments could be made to the speed, allowing the unit to accommodate the required discharge pressures. The customer is pleased with the mixed product and the flexibility the unit provides for running additional products.
