CHALLENGE

The particular minerals required do not easily dissolve in water.

SOLUTION

This customer wanted two complete blending setups so Ampco recommended the SBI, this unit blends and pumps. To assist in feeding the unit the customer purchased two SP220 self-priming pumps along with two DC pumps for the CIP return. The DC pumps have double volute design that helps reduce air binding in the pump; a common issue with CIP return.

The customer is pleased with the systems and the quality of the blended product he is now producing.
